<code>archive_stage</code>	Creating a Single Backup of the Version Files
<code>archive_stage_repeat</code>	Creating Multiple Archives of the Version Files
<code>autolog_cancel</code>	Canceling the Automatic Log Backup
<code>autolog_off</code>	Deactivating the Automatic Log Backup
<code>autolog_on</code>	Activating the Automatic Log Backup
<code>autolog_show</code>	Displaying the Automatic Log Backup Function
<code>backup_cancel</code>	Terminating an Interrupted Backup
<code>backup_ext_ids_forget</code>	Releasing the Memory Occupied by the External Backup IDs
<code>backup_ext_ids_get</code>	Fetching External Backup IDs
<code>backup_ext_ids_list</code>	Displaying External Backup IDs
<code>backup_ext_ids_listnext</code>	Scrolling in the External Backup IDs
<code>backup_history_close</code>	Closing the Backup History
<code>backup_history_date</code>	Change Date of the Backup History
<code>backup_history_list</code>	Displaying the Backup History
<code>backup_history_listnext</code>	Scrolling in the Backup History
<code>backup_history_open</code>	Fetching the Backup History
<code>backup_ignore</code>	Continuing the Backup Without the Medium Last Reported as Full
<code>backup_replace</code>	Backing Up to a Succeeding Medium
<code>backup_start</code>	Backing Up the Database Instance
<code>backup_state</code>	Displaying the Current Backup Status
<code>db_addvolume</code>	Adding a Volume
<code>db_admin</code>	Transferring to the ADMIN Operational State
<code>db_clear</code>	Deleting Runtime Information After a Database Error
<code>db_cons</code>	Using the Database Console
<code>db_create</code>	Registering a Database Instance
<code>db_drop</code>	Deleting the Current Database Instance
<code>db_enum</code>	List of All Registered Database Instances
<code>db_offline</code>	Transferring to the OFFLINE Operational State
<code>db_online</code>	Transferring to the ONLINE Operational State
<code>db_reg</code>	Registering a Variant of the Current Database Instance
<code>db_reg -R</code>	Changing the Software Version of the Current Database Instance
<code>db_restart</code>	Restarting the Database Instance
<code>db_restartinfo</code>	Displaying Current Information About the Database Instance
<code>db_speed</code>	Displaying the Database Kernel Variant
<code>db_start</code>	Starting the Database Instance
<code>db_state</code>	Displaying the Operational State of the Database Instance
<code>db_stop</code>	Stopping the Database Instance
<code>db_unreg</code>	Deleting the Registration of a Variant of the Current Database Instance
<code>dban_start</code>	Calling the Database Analyzer
<code>dban_state</code>	Determining the Status of the Database Analyzer
<code>dban_stop</code>	Ending the Database Analyzer
<code>dbm_configget</code>	Displaying a Configuration Parameter of the Database Manager

<code>dbm_configset</code>	Changing a Configuration Parameter of the Database Manager
<code>dbm_getpath</code>	Displaying the Version-Independent Directories
<code>dbm_setpath</code>	Defining the Version-Independent Directories
<code>diag_histlist</code>	Displaying the Diagnosis History
<code>diag_pack</code>	Packing Diagnosis and Database Files
<code>event_delete</code>	Deactivating a Database Event
<code>event_list</code>	List of Activated Database Events
<code>event_release</code>	Terminating a Database Event Session
<code>event_set</code>	Activating a Database Event
<code>event_wait</code>	Waiting for a Database Event
<code>exec_lcinit</code>	Executing the liveCache Initialization Script
<code>exec_load</code>	Starting the PythonLOAD Program
<code>exec_xload</code>	Starting the LOAD Program
<code>exec_xpu</code>	Updating the Optimizer Statistics with the XPU Program
<code>file_backup</code>	Backing Up a Database File
<code>file_getfirst</code>	Opening a Database File
<code>file_getlist</code>	List of the Database Files
<code>file_getnext</code>	Scrolling Through a Database File
<code>file_operation</code>	Editing a Database File
<code>file_restore</code>	Restoring a Database File
<code>info</code>	Displaying Status Information for the Database Instance
<code>info_next</code>	Scrolling in the Status Information of the Database Instance
<code>inst_enum</code>	List of All Registered Versions of the Database Software
<code>inst_reg</code>	Registering a Version of the Database Software
<code>inst_unreg</code>	Deleting the Registration of a Version of the Database Software
<code>load_rtab</code>	Loading SAP-Specific Tables
<code>load_systab</code>	Loading the System Tables
<code>medium_date</code>	Change Date of the Media Definition File
<code>medium_delete</code>	Deleting a Backup Medium
<code>medium_get</code>	Displaying the Media Data
<code>medium_getall</code>	List of All Defined Backup Media
<code>medium_label</code>	Displaying the Backup Information in the Operational State ONLINE or ADMIN
<code>medium_labeloffline</code>	Displaying the Backup Information in the Operational State OFFLINE
<code>medium_migrate</code>	Transferring an Existing Media Definition
<code>medium_put</code>	Defining or Changing a Backup Medium
<code>param_abortsession</code>	Terminating a Parameter Session
<code>param_addvolume</code>	Changing Volume Parameters
<code>param_checkall</code>	Checking All Database Parameters
<code>param_commitsession</code>	Confirming Changes to the Database Parameter File
<code>param_copy</code>	Copying a Database Parameter File
<code>param_delvolume</code>	Deleting Volume Parameters
<code>param_directdel</code>	Deleting a Database Parameter
<code>param_directget</code>	Displaying a Value from the Database Parameter File

<code>param_directgetall</code>	Displaying All Parameters of the Current Database Parameter File
<code>param_directput</code>	Directly Changing a Value in the Database Parameter File
<code>param_extget</code>	Displaying Individual Data for a Database Parameter
<code>param_extgetall</code>	Displaying the Data for All Database Parameters
<code>param_getdefault</code>	Displaying the System Default Value
<code>param_getexplain</code>	Displaying the Stored Explanatory Text
<code>param_getfull</code>	Displaying All Data for a Database Parameter
<code>param_gethelp</code>	Displaying the Stored Help Text
<code>param_gethistory</code>	Opening the Database Parameter History
<code>param_gethistorynext</code>	Scrolling in the Database Parameter History
<code>param_getproperties</code>	Displaying All Properties of a Database Parameter
<code>param_gettype</code>	Displaying the Data Type of a Database Parameter
<code>param_getvalue</code>	Displaying the Current Value of a Database Parameter
<code>param_getvolsall</code>	Displaying the Data for All Volume Parameters
<code>param_getvolume</code>	Displaying the Data for Individual Volume Parameters
<code>param_init</code>	Initializing the Database Parameters for a New Database Instance
<code>param_put</code>	Changing the Value of a Database Parameter
<code>param_putconfirm</code>	Correcting Database Parameters
<code>param_restore</code>	Resetting the Parameter File to a Previous Version
<code>param_rmfile</code>	Deleting the Database Parameter File
<code>param_startsession</code>	Opening a Parameter Session
<code>param_versions</code>	List of Available Parameter Files
<code>recover_cancel</code>	Terminating an Interrupted Restore or Backup Check
<code>recover_check</code>	Checking a Backup
<code>recover_config</code>	Restoring the Parameter File from a Data Backup
<code>recover_ignore</code>	Continuing a Parallel Restore or Backup Check
<code>recover_replace</code>	Restoring or Checking a Backup with Succeeding Medium
<code>recover_start</code>	Restoring the Database Instance
<code>recover_state</code>	Displaying the Current Recovery Status
<code>recover_state_check</code>	Displaying the Current Status of a Backup Check
<code>service_connect</code>	Opening a Service Session
<code>service_release</code>	Terminating a Service Session
<code>show</code>	Displaying Information About the Database Instance
<code>show_list</code>	List of the Information About the Database Instance
<code>show_next</code>	Scrolling in the Information About the Database Instance
<code>sql_connect</code>	Opening an SQL Session
<code>sql_execute</code>	Transferring an SQL Statement
<code>sql_fetch</code>	Scrolling in the Result Data
<code>sql_info</code>	Displaying the Structure of a Result Set
<code>sql_recreateindex</code>	Recreating a Damaged Index
<code>sql_release</code>	Terminating an SQL Session
<code>sql_updatestat</code>	Updating the Optimizer Statistics
<code>trace_off</code>	Deactivating the Database Trace
<code>trace_prot</code>	Creating the Text Version of the Database Trace
<code>trace_protopt</code>	Displaying Options for Text Version of the Database Trace
<code>trace_show</code>	Displaying the Logged Activities of the Database Trace

<code>user_create</code>	Creating DBM Operators
<code>user_delete</code>	Deleting DBM Operators
<code>user_get</code>	Displaying Operator Data
<code>user_getall</code>	List of DBM Operators
<code>user_getrights</code>	Displaying Operator Authorizations
<code>user_put</code>	Changing DBM Operator Data
<code>util_activate</code>	Activating a New Database Instance
<code>util_connect</code>	Opening a Utility Session
<code>util_execute</code>	Transferring a Utility or SQL Command
<code>util_getpage</code>	Displaying a Physical Database Page
<code>util_putpage</code>	Writing a Physical Database Page
<code>util_release</code>	Terminating a Utility Session
